DETAILED ACTION

1. This Office Action is the answer to the Amendment filed on May 11, 2001 , which paper has been placed of record in the file.
2. Claims 53-62 and 73-82 are pending in this application.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.

4. Claims 53-62 and 73-82 are rejected under 35 U.S.C. 102(e) as being anticipated by Ginter et al, U.S. Patent No. 5,892,900.

Regarding to claim 73, Ginter discloses a method for providing a collection of data structures and subroutines for developing an application for paying digital content data, the method comprising the steps of:

receiving previously encrypted content data encrypted with an encrypted key from an external source (column 309, line 25-column 313, line 56) ;

Art Unit: 2164

storing the previously encrypted content data in library (column 307, line 5-column 308, line 61);

selecting one or more encrypted content data from the library to play (column 198, line 40-column 199, line 32); and

decrypting each content data selected to be played with its unique decrypting key, wherein the decrypting is performed in a tamper-resistant subroutine for deterring unauthorized access to the instructions for decrypting the content data and for deterring unauthorized access to the decrypting key (column 195, lines 27-47 and column 64, lines 15-40).

Regarding to claim 74, Ginter further discloses decrypting the received previously encrypted content data prior to storage in the library; re-encrypting the decrypted receive content data with a local encryption key wherein the decrypting and re-encrypting instructions are performed in the tamper resistant subroutine (columns 170-172).

Regarding to claim 75, Ginter further discloses re-encrypting the decrypted receive content data utilizes a unique local encryption key for each content data prior to storage (column 171, lines 43-55).

Regarding to claim 76, Ginter further discloses re-encrypting each unique local encryption key with a common local encryption key (column 173, lines 45-60).

Regarding to claims 77-78, Ginter further discloses storing the unique local encryption key and the common local encryption key in several distinct parts throughout an information processing system (column 171, lines 48-51).

Art Unit: 2164

Regarding to claims 79-81, Ginter further discloses creating play-lists for playing one or more content data and playing the content data in each play list; naming each play-list created; storing the named play list for playing the content data in each play list at a later time; sorting each play-list in response to a user request (columns 314-316).

Regarding to claim 82, Ginter further discloses playing each content data selected to be played; and displaying the metadata associated with the content data (columns 316-320).

Claims 53-62 are written in computer software and parallel limitations as found in claims 73-82 discussed above, therefore are rejected by the same rationale.

Conclusion

5. Claims **53-62** and **73-82** are rejected.
